### Short Essay

“One World One Health” is a concept that was proposed in “Manhattan Principles” by Wild Conservation Society in 2004. In “Manhattan Principles”, it is proposed that a more interdisciplinary and cross-sectoral approach is required for maintaining the integrity of ecosystems, including the health of humans, companion, production, and captive animals, and wildlife.

Considering the description above, first, describe your opinion and thought against a concept “One World One Health or Zoonotic”, second, describe about the specific field that you are going to acquire in the Graduate Schools and the reason why you are interested in the field, and describe how knowledge and skills of the specific field will contribute to “One Health or Zoonotic”. (around 1200 words)
