Sept 11 (Mon)	<p>School life in Thailand has started from today.</p> <p>Two weeks from today is an epidemiology class.</p> <p>We discussed about rabies and water pollution for each group, and made a presentation.</p> <p>Making a presentation in English was difficult and I was very nervous.</p> <p>After school, professors and students opened a welcome party.</p> <p>I was pleased to interact.</p>
Sept 12 (Tue)	<p>I learned about statistics.</p> <p>I studied about basic knowledge, for example mean, median, mode, Confidence Interval and so on.</p> <p>Statistics is indispensable to epidemiology, so I try to keep studying and want to master.</p>
Sept 13 (Wed)	<p>I learned statistics on computer.</p> <p>I was able to know various analysis methods using actual data.</p> <p>I felt again the importance of statistics.</p> <p>Classes in English are not used yet, but I would like to actively participate.</p>
Sept 14 (Thu)	<p>I learned about sample size.</p> <p>I practiced to obtain sample size from population, proportion, error and so on.</p> <p>The formula is deep, so ProMESA and n4studies were very useful soft.</p> <p>I want to make the most of it.</p>
Sept 15 (Fri)	<p>I went to Suvarnabhumi International Airport.</p> <p>I'm interested in working at the Airport, so I was looking forward to visiting there.</p> <p>I studied about the facility of Suvarnabhumi International Airport, the quarantine and the sniffer dogs.</p> <p>Before I have been to practice at the Airport in Japan, so I was able to know the difference between Japan and Thailand.</p>
Sept 16 (Sat)	<p>No activity</p>

Sept 17 (Sun)	No activity
Sept 18 (Mon)	<p>I discussed in group about water pollution.</p> <p>It was difficult to pursue the one thing deeply, I had a hard time finely deciding how to investigate.</p> <p>I would like to make efforts to make the best use of what I have learned until now.</p>
Sept 19 (Tue)	<p>I went to Lopburi.</p> <p>I received the lecture about monkeys. I found that the local people use bamboo to separate the place where the human live and the place the monkeys live. They are living in balance with each other by various ingenuity.</p> <p>After that we went to the landfill, and I surprised the amount of garbage.</p>
Sept 20 (Wed)	<p>I went to the landfill again, and I sampled water, soil and air.</p> <p>I was able to know the method of sampling.</p> <p>Next I went to center of Lopburi. I was able to see a lot of monkeys in there.</p> <p>The big difference between monkeys in rural and them in urban is length of the tail, and the monkeys in rural have shorter tail than in urban.</p> <p>I was able to see the human and the monkeys living together.</p>
Sept 21 (Thu)	<p>We did discuss for the final presentation.</p> <p>Setting up the statistics, study and detecting sample size was very difficult. Once I studied about them in Japan, but I was able to deepen the knowledge by reflecting on them again.</p>
Sept 22 (Fri)	<p>Today we made the last presentation for each group.</p> <p>Our study was about water pollution, and we especially focused on Salmonella.</p> <p>The presentation in English was very difficult, and I was very nervous.</p> <p>I was able to find the improvement in this presentation, so I would like to complete a full paper by the date of submission.</p>

Sept 23 (Sat)	No activity
Sept 24 (Sun)	No activity
Sept 25 (Mon)	<p>It was the first day of surgical practice.</p> <p>The first case was perianal adenoma. I participated as an assistant, but I was not able to do it well. So I was very frustrating.</p> <p>The second case was squamous cell carcinoma. After surgery, the cat took a long time to wake up. The surgical traces were big, but I thought that she could not change her life.</p>
Sept 26 (Tue)	<p>I watched operation in the morning.</p> <p>The case was castration, remove mass and cryptorchidism.</p> <p>I did an assistant in the afternoon.</p> <p>The case was pyometra.</p> <p>Today's case took a long time, so it is important for veterinarians to have concentration and physical fitness.</p>
Sept 27 (Wed)	<p>Today I did an assistant in 2 cases.</p> <p>The first case was penile amputation, scrotal amputation and scrotal urethrostomy.</p> <p>The second case was dermoid cyst. This is often seen in thai ridge back. Thai ridge back is common breed in Thailand.</p> <p>The mass which picked up included the hair. That was shocking, but I was glad I could actually see it.</p>
Sept 28 (Thu)	<p>Today's case was remove mass.</p> <p>I did an assistant and sutured for the first time.</p> <p>I did suture practice in japan, but it was difficult to actually do.</p> <p>I was able to have a valuable experience.</p>
